

Langages de modélisation pédagogique : enjeux, perspectives et évolutions...

Anne Lejeune (*), Jean-Philippe
Pernin(*, **),

(*) **Laboratoire CLIPS-IMAG, Grenoble**

(**) **Institut national de recherche pédagogique,
ERTé e-Praxis**

Why this seminar ?

INTERNATIONAL LEVEL (Since 2002)

Intense activity about Learning Design and Educational Modelling Languages
Centered on IMS LD Specification, based on Instructional Design approach
New challenges...

FRENCH COMMUNITY

- **Not closely implied in current works**
- **Specific socio-educational context**
 - Role of teacher
 - Importance of didactic features
 - Situated learning
- **Emergence of a French scientific community about Educational Modelling**

EVALUATE, EXCHANGE AND COMPARE

BUILD NEW COLLABORATIONS ?

Scheduling 9h-13h

- ❑ Presentation of Colin Tattersall (OUNL)
 - ❑ Learning Design : Current questions and new challenges
- ❑ Survey of french works
 - ❑ Anne Lejeune and J-P Pernin (CLIPS-IMAG & INRP)
- ❑ A series of specific presentations
 - ❑ Pierre Laforcade (laboratoire LIUM, Le Mans)
 - ❑ Xavier Le Pallec (laboratoire TRIGONE, Lille)
 - ❑ Thierry Nodenot (laboratoire LIUPPA, Bayonne)
 - ❑ Christian Martel (laboratoire SYSCOM, Chambéry, PENTILA)
 - ❑ Viviane Guéraud (laboratoire CLIPS-IMAG, Grenoble)
- ❑ Discussion

Colin Tattersall

Open University of the Netherlands

Learning Design : Current questions and new challenges

The last two to three years has seen a number of R&D projects investigating the use of the IMS Learning Design specification in e-learning. These projects have examined the nature of pedagogical models, the tools needed to create such descriptions, delivery issues, harmonization with other specifications, and the position of IMS Learning Design in a changing e-learning landscape. The specification plays a central role in a number of new European projects which aim to prepare the way for adoption and use of the specification by a wider audience. This talk will review the current state-of-the-art, posing a number of challenges to reaching this goal, together with plans for meetings them

Research about Educational Modeling in France: stakes and challenges...

Anne Lejeune / Jean-Philippe Pernin

INRP

Educational Modeling

- Part 1: Introduction
- Part 2: Topics, stakes and challenges in the French research landscape
- Part 3: Actors, goals and process

Describing Learning Situations: Why?

- To share:
 - Pedagogical expertise
 - Good practices
 - Learning experiences
 - To allow pedagogical scenarios to be processed automatically by LMS, and support:
 - Reuse
 - Adaptability
 - Interoperability
- In order to increase:
- ✓ Effectiveness
 - ✓ Efficiency
 - ✓ Attractiveness
 - ✓ Accessibility

Describing Learning Situations: What?

- Face to face Learning

- Blended Learning

- Distant Learning

Describing Learning Situations: Who?

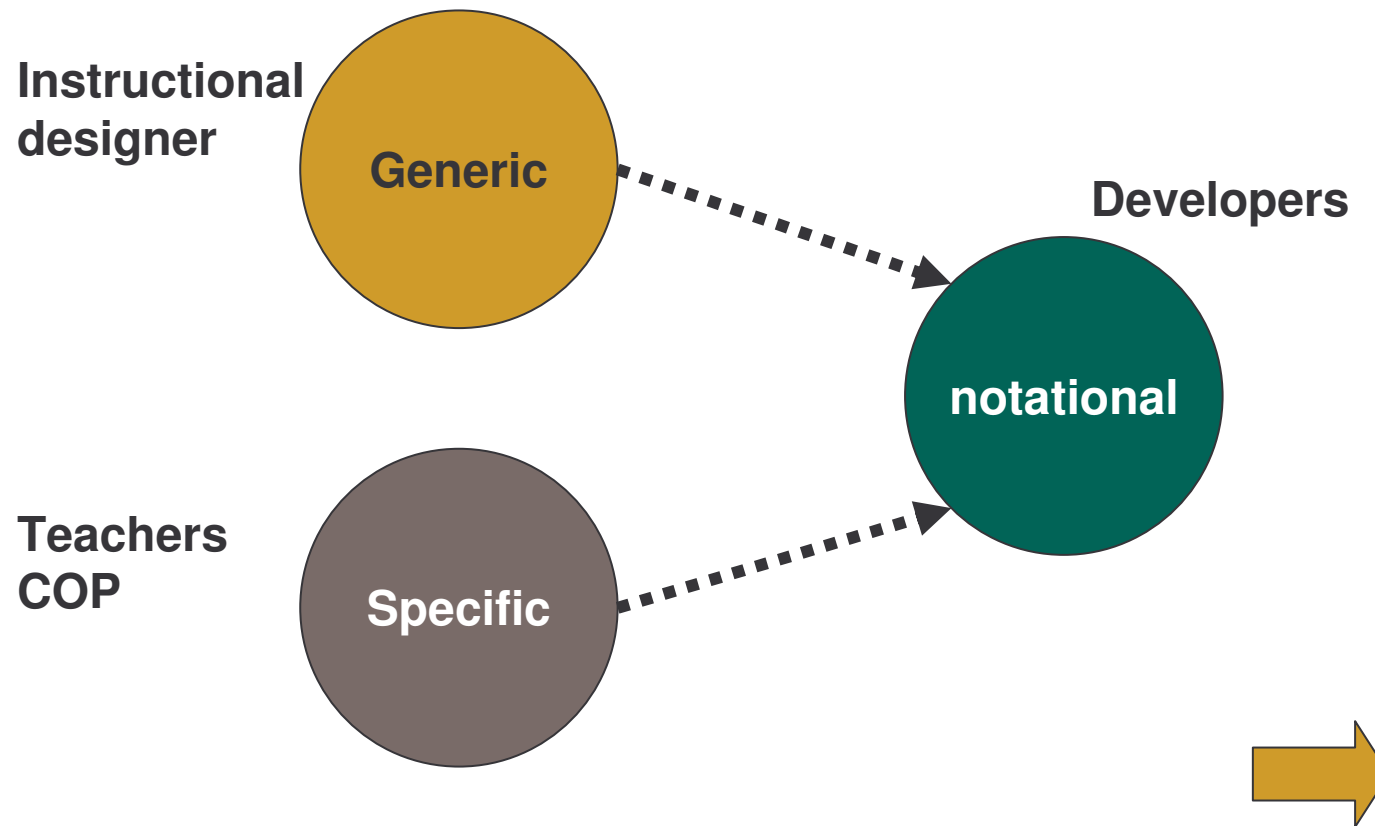

- Teacher
- Instructional designer (pedagogical engineer)
- Developers
- Teacher/pedagogical engineer

Describing → Modeling Learning Scenarios

- We need to formalize when:
 - The learning situation has to be run on a LMS
 - Consensus is needed to express a scenario between practitioners of a same community
 - Transformations are required to adapt a scenario
 - A priori (design phase)
 - During run time (execution phase)
 - A posteriori (evaluation/analysis phase)

Modeling Learning Situations: How?

- *Using Educational Modeling Language S...*

Educational Modeling Languages

- EML Survey (CEN/ISSS 2002):

An EML is a semantic information model and binding, describing the content and process within a 'unit of learning' from a pedagogical perspective in order to support reuse and interoperability

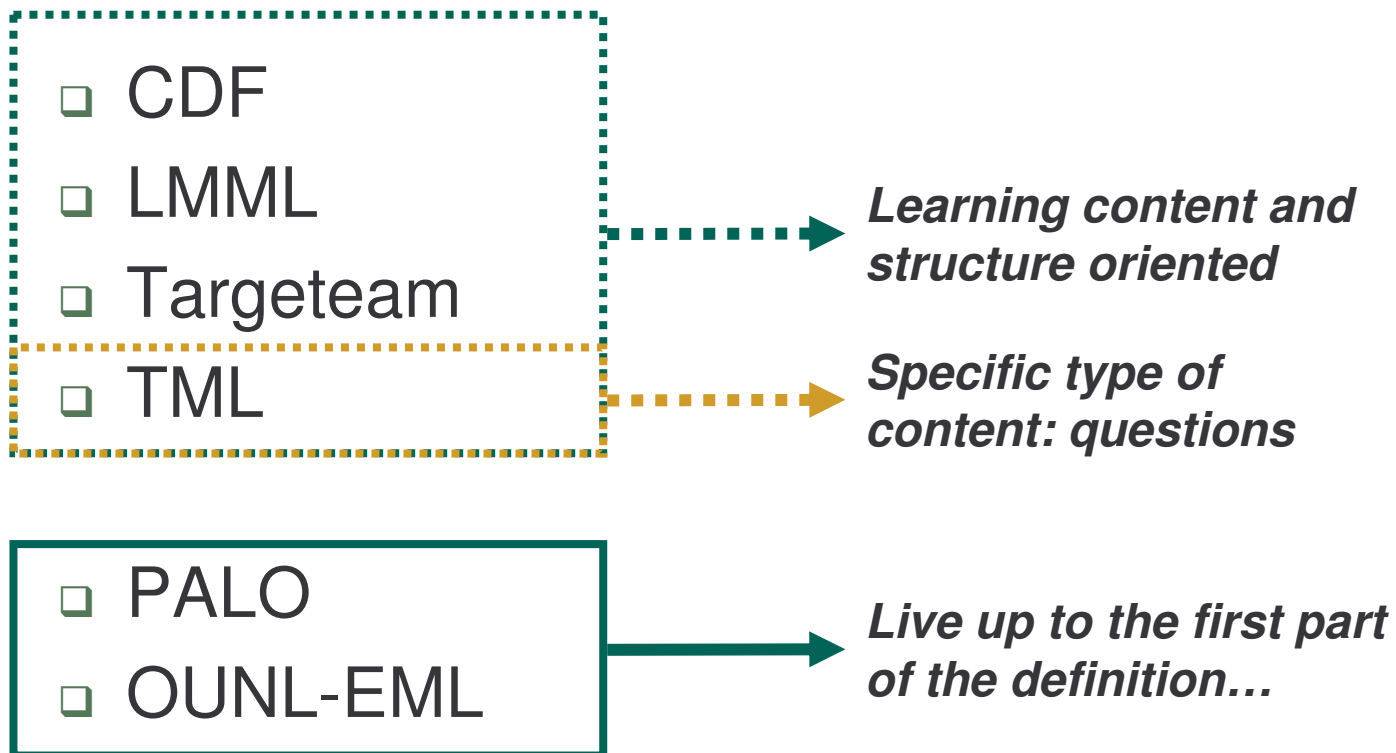

- EMLs studied in the survey:

- PALO (UNED-Spain)
- CDF (EPFL-Switzerland)
- LMML (UP-Germany)
- Targeteam (UB-Germany)
- EML (OUNL-Netherlands)
- TML/NetQuest (ILRT-United Kingdom)

Educational Modeling Languages

■ Conclusions of the survey...

Educational Modeling Languages

- And the winner is... ***OUNL-EML v1.1***

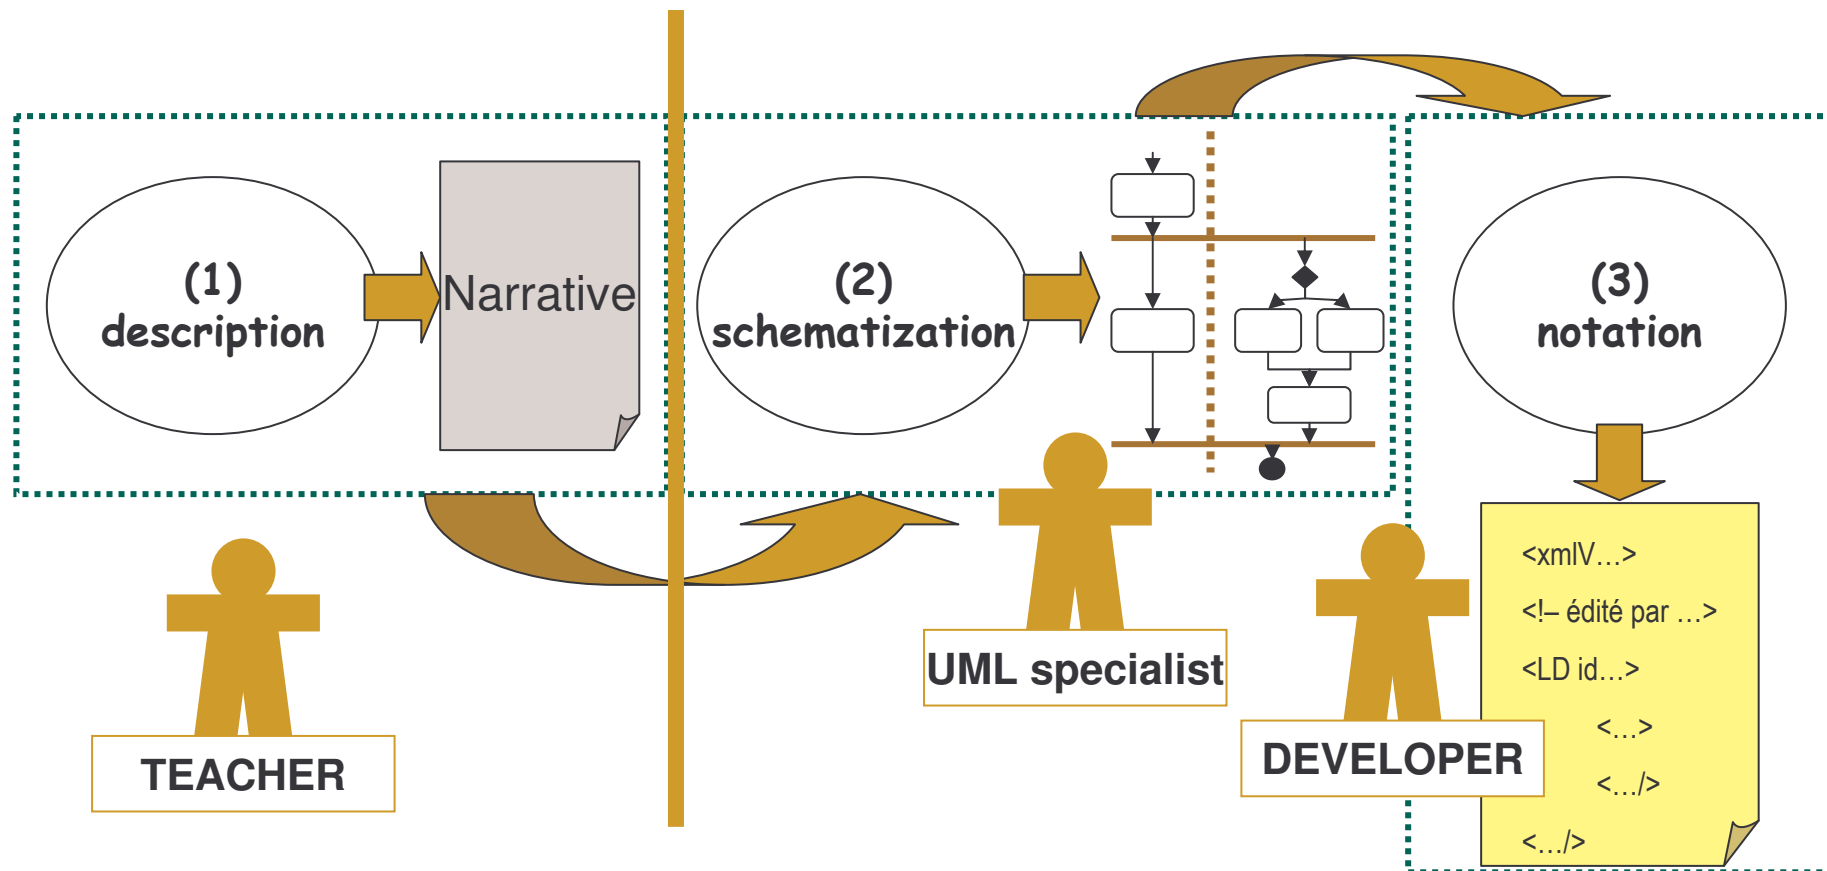

« ...it is important to note that currently OUNL-EML (version 1.1) is the only one of the EMLs discussed which both is compatible with various international standards and follows the process and procedures to be accepted as a standard »

(CEN/ISSS 2002)

- **OUNL-EML = basis of IMS LD**

IMS Learning Design: design process

- From the description of a pedagogical scenario to a model compliant with IMS LD specification...

IMS LD / Our questions?

<i>Designing with IMS LD</i>			
Why	To share	?/Yes	XML docs?
	To process on a LMS	Yes	<ul style="list-style-type: none"> ■ Interoperability ■ Reusing ■ Adaptability (when?)
What	Face to face	Utility?	
	Blended	?	All pedagogical situations?
	Distant	Yes	
Who	Teacher	?	<u>Other languages may be necessary...</u>
	Pedagogical engineer	?	
	Developer	Yes	If IMS LD specialist

French “specificities”

- The teacher manages his teaching methods
- National prescription rather constrains:
 - General programs
 - Required teachers' diploma ↔ level of learners' studies
 - Duration of cycles, courses,...
- Importance of didactic (few compliant with “instructional design”)

Educational Modeling

- Part 1: Introduction
- Part 2: Topics, stakes and challenges in the French research landscape
- Part 3: Activities, actors, goals and process

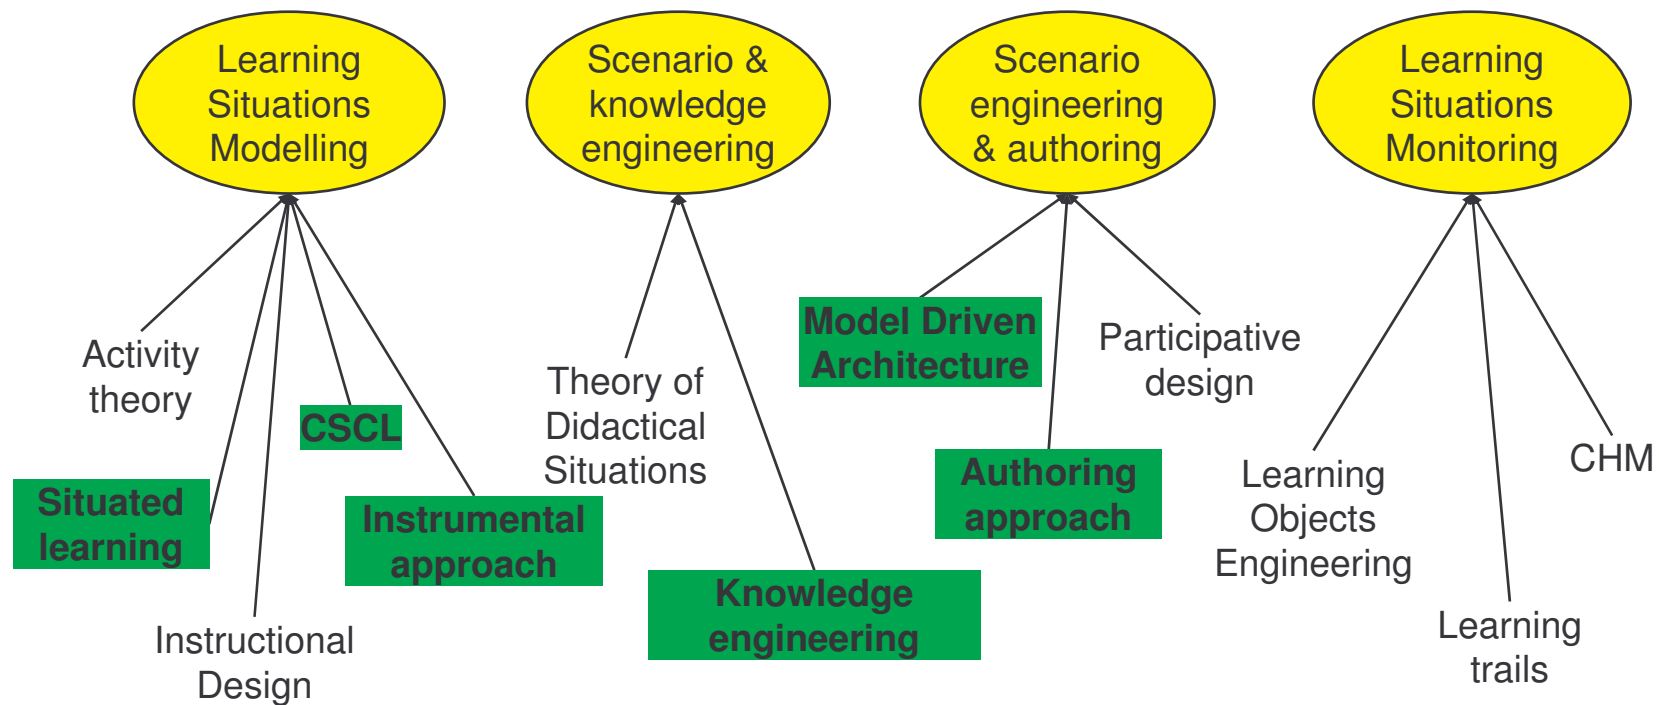

Research informal group about Learning Design

Recent main French events related to Learning Design

- **Jan-Dec 2004 : Kaleidoscope JEIRP TRAILS**, Trail on learning objects
Repr. J.-P. David
- **Jan-Dec 2005 : Kaleidoscope JEIRP DPULS**, Design Patterns for recording and analysing Usage in Learning Systems
dir. C. Choquet
- **April 2005 : UNFOLD presentation (dissemination of IMS LD)**
Animation : M. Arnaud, B.Olivier, D. Burgos, C. Kew
- **May 2005 : Specific topic about IMS LD in EIAH 05 conference**
J-P.Pernin, T. Nodenot, C. Martel, C.Choquet
- **July 2005 : EIAH Summer school in Autrans**
J-P Pernin, C. Choquet, A. Lejeune, P. Laforcade, X. Le Pallex, T. Nodenot, C Martel, with participation of C. Kew (Unfold), O.Marino (Teluq)
- **April 2006 : Francophone conference about scenarization**
J-P. Pernin & H. Godinet, 24 papers, 100 participants
- **July 2006 : ICALT workshop**
Comparing Educational Modeling Languages on a case study proposed by C. Martel

Main theoretical frameworks and topics of interest

<p>10h-10h40</p>	<p>Anne Lejeune, <u>ERTé E-Praxis</u> - CLIPS-IMAG (Grenoble) Jean Philippe Pernin, <u>ERTé E-Praxis</u> - INRP (Lyon) et CLIPS-IMAG (Grenoble) Modélisation pédagogique : acteurs, objectifs et processus <i>Educational Modelling : actors, goals and process</i></p>
<p>11h-11h40</p> <p>Scénarios d'apprentissage et ingénierie dirigée par les modèles</p>	<p>Pierre <u>Laforcade</u> (laboratoire LIUM, Le Mans) L'application de l'approche dirigée par les modèles aux scénarios d'apprentissage <i>Model Driven Approach Applied to Learning Scenarios</i></p> <hr/> <p>Xavier <u>Le Pallec</u> (laboratoire TRIGONE, Lille) Construction de dispositifs pédagogiques au travers de l'Ingénierie Dirigée par les Modèles <i>Constructing learning environment through Model-Driven Engineering</i></p>
<p>11h40-12h40</p> <p>Quelle neutralité ou généricité pour les langages de modélisation pédagogique ?</p>	<p>Thierry <u>Nodenot</u> (laboratoire LIUPPA, Bayonne) CPM: un profil UML pour concevoir des situations problèmes coopératives <i>CPM: a UML Profile to design Cooperative PBL situations at didactical level</i></p> <hr/> <p>Christian <u>Martel</u> (laboratoire SYSCOM, Chambéry, PENTILA) La modélisation d'activités d'apprentissage collaboratif : LDL, un métamodèle centré sur les interactions <i>Modelling Collaborative Learning Activities: LDL, a interaction-centred metamodel</i></p> <hr/> <p>Viviane <u>Guéraud</u> (laboratoire CLIPS-IMAG, Grenoble) Scénariser finement l'activité d'un apprenant sur un objet pédagogique interactif (simulation, <u>micro-monde</u>,...): modélisation, approche auteur et ingénierie <i>Fine-grained scenarios of student's task on interactive learning objects (simulation, micro-world,...) : modelling, authoring approach and engineering</i></p>

Educational Modeling

- Part 1: Introduction
- Part 2: Topics, stakes and challenges in the French research landscape
- Part 3: Activities, actors, goals and process

Situated Learning : what is a learning situation ?

Instrumental genesis theory (1)

Instrumental genesis theory (2)

- Two dual process
 - User's instrumentation
 - User builds the more coherent set of instruments adapted to his task
 - Artifact's instrumentalization
 - Adjusting artifact and its functions to a specific context
- Design of artifacts is shared between designers and users
- Design of artifacts is a continuous process

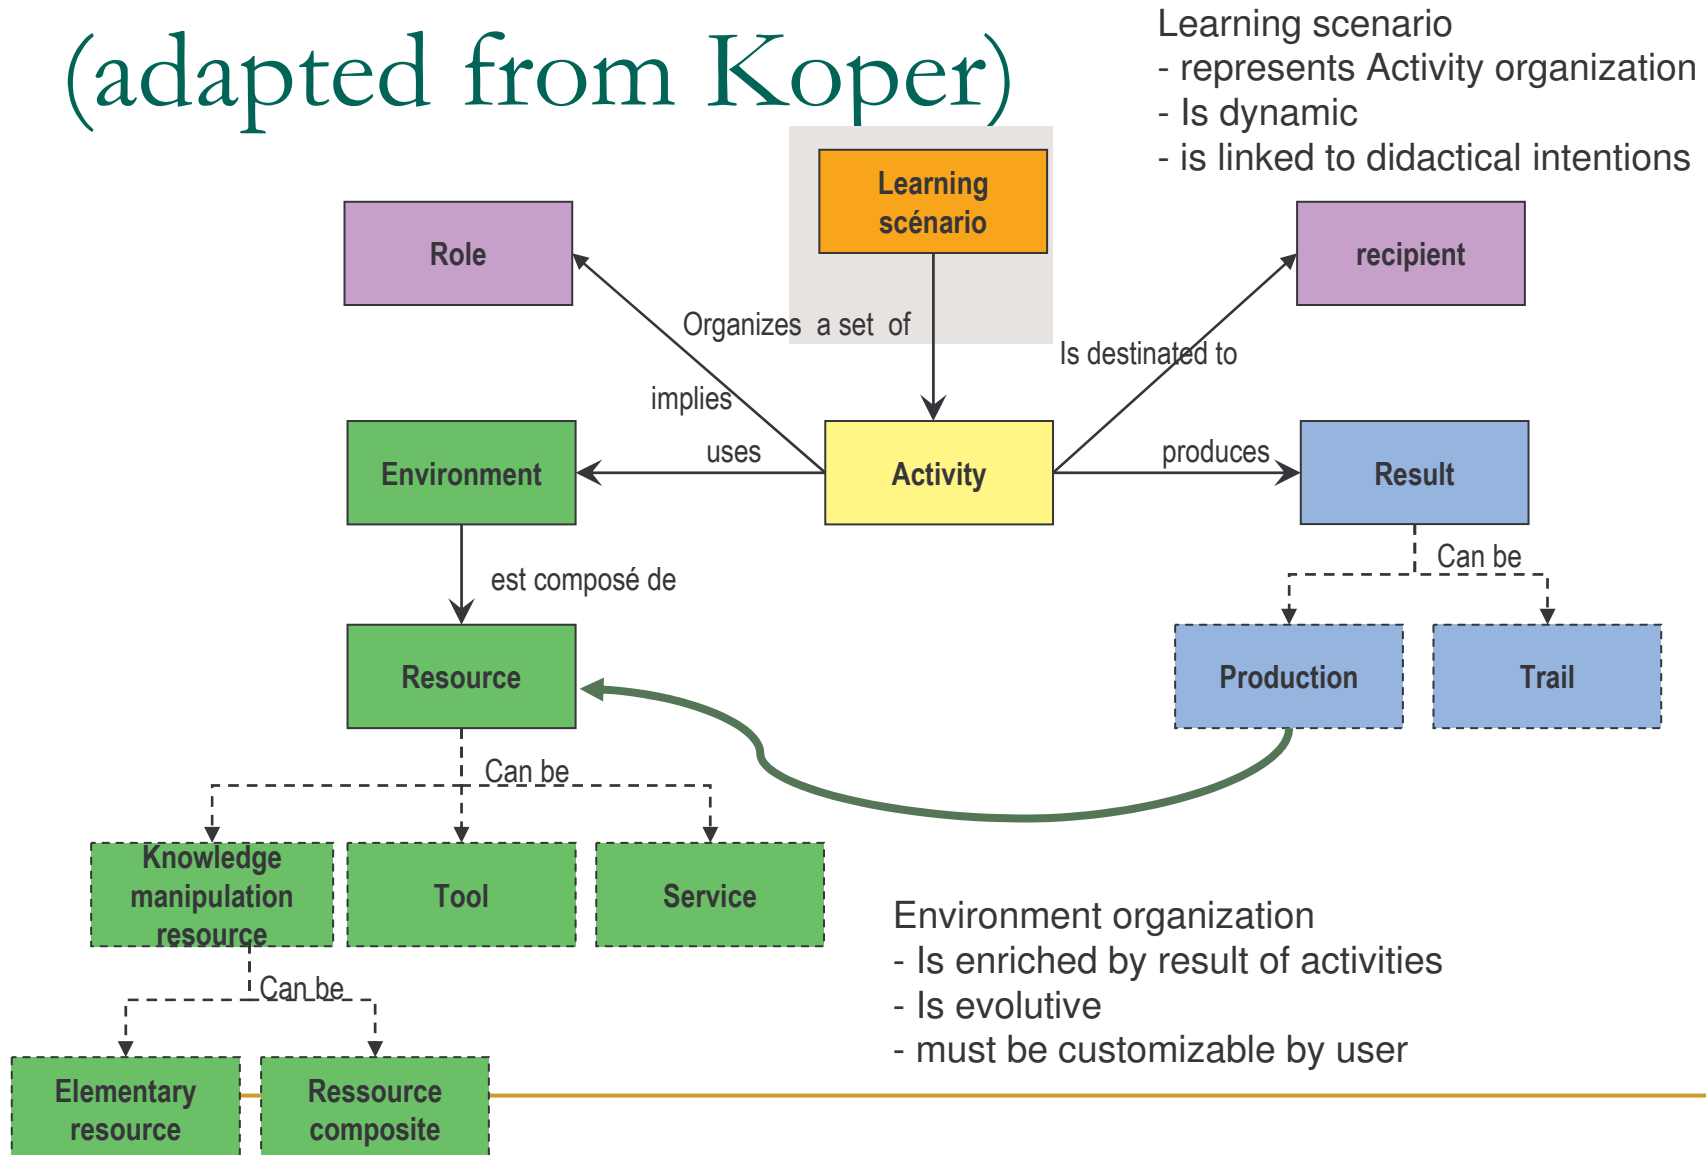

Consequences on Learning Design

- Learning Design
 - is shared between designers and users
 - is a continuous process
- The organization of activities
 - a priori, can be only “roughly” defined
 - Is dynamically refined and adapted at runtime
- The technical environment (= instrumental system)
 - a priori, can be only indicatively defined
 - is enriched by results of activities
 - is adapted and customized by each user

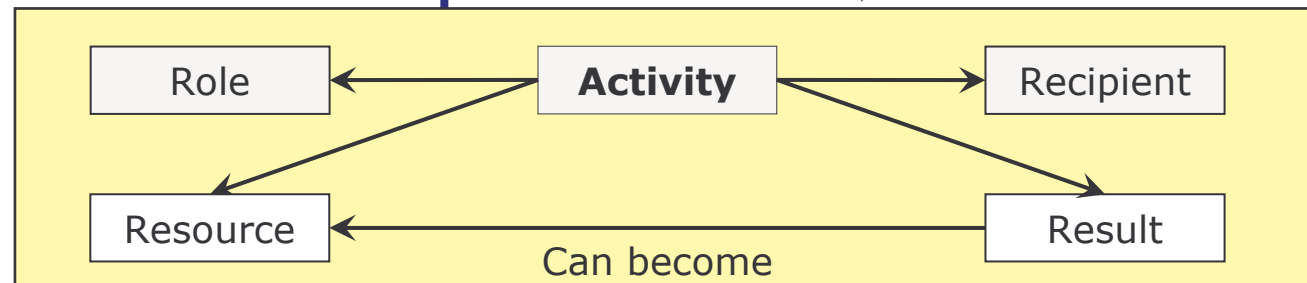

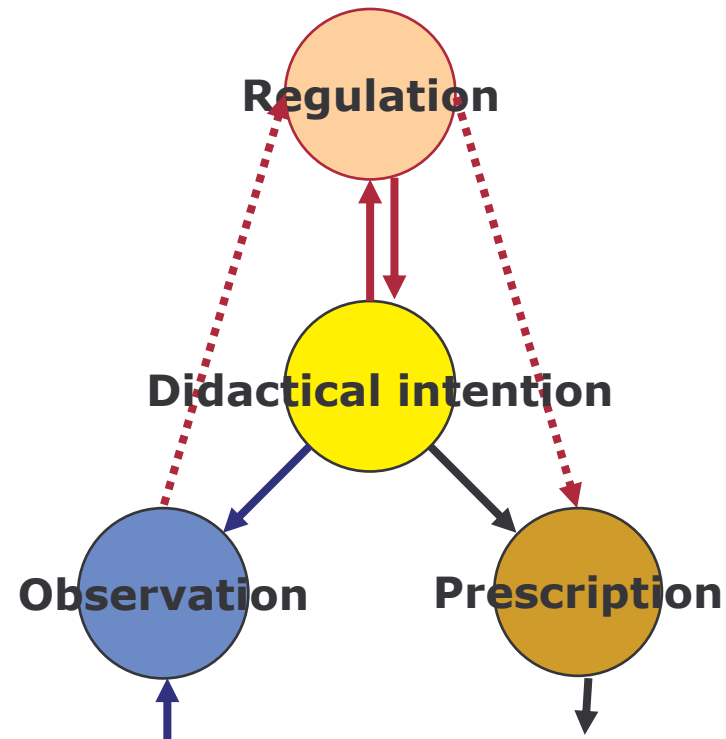

Learning situation's characteristics

- Multiple interactions between humans and computer
 - Activity systems must be customizable
- Learning activity prescription and regulation result from a didactical intention
 - Activity systems must be related to didactical intentions
- Identify :
 - process : **scenarization**
 - Intermediary results : progressively enriched and adapted forms of the **learning scenario**

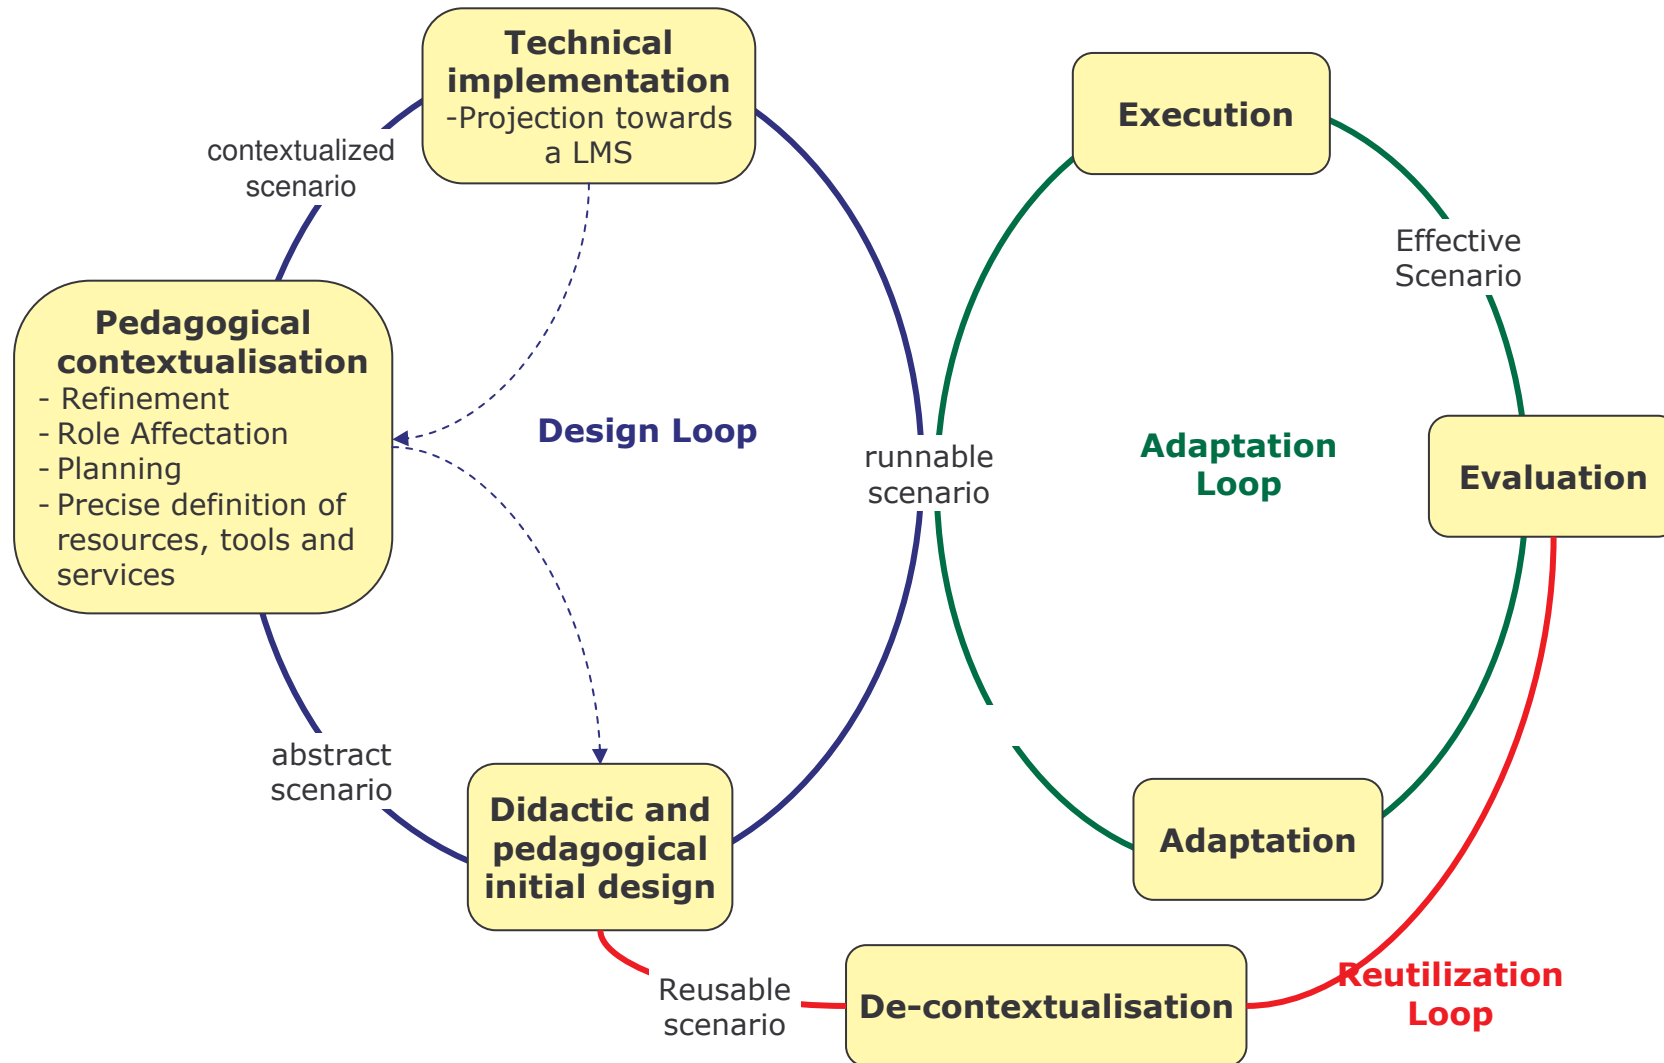

Proposed conceptual framework (adapted from Koper)

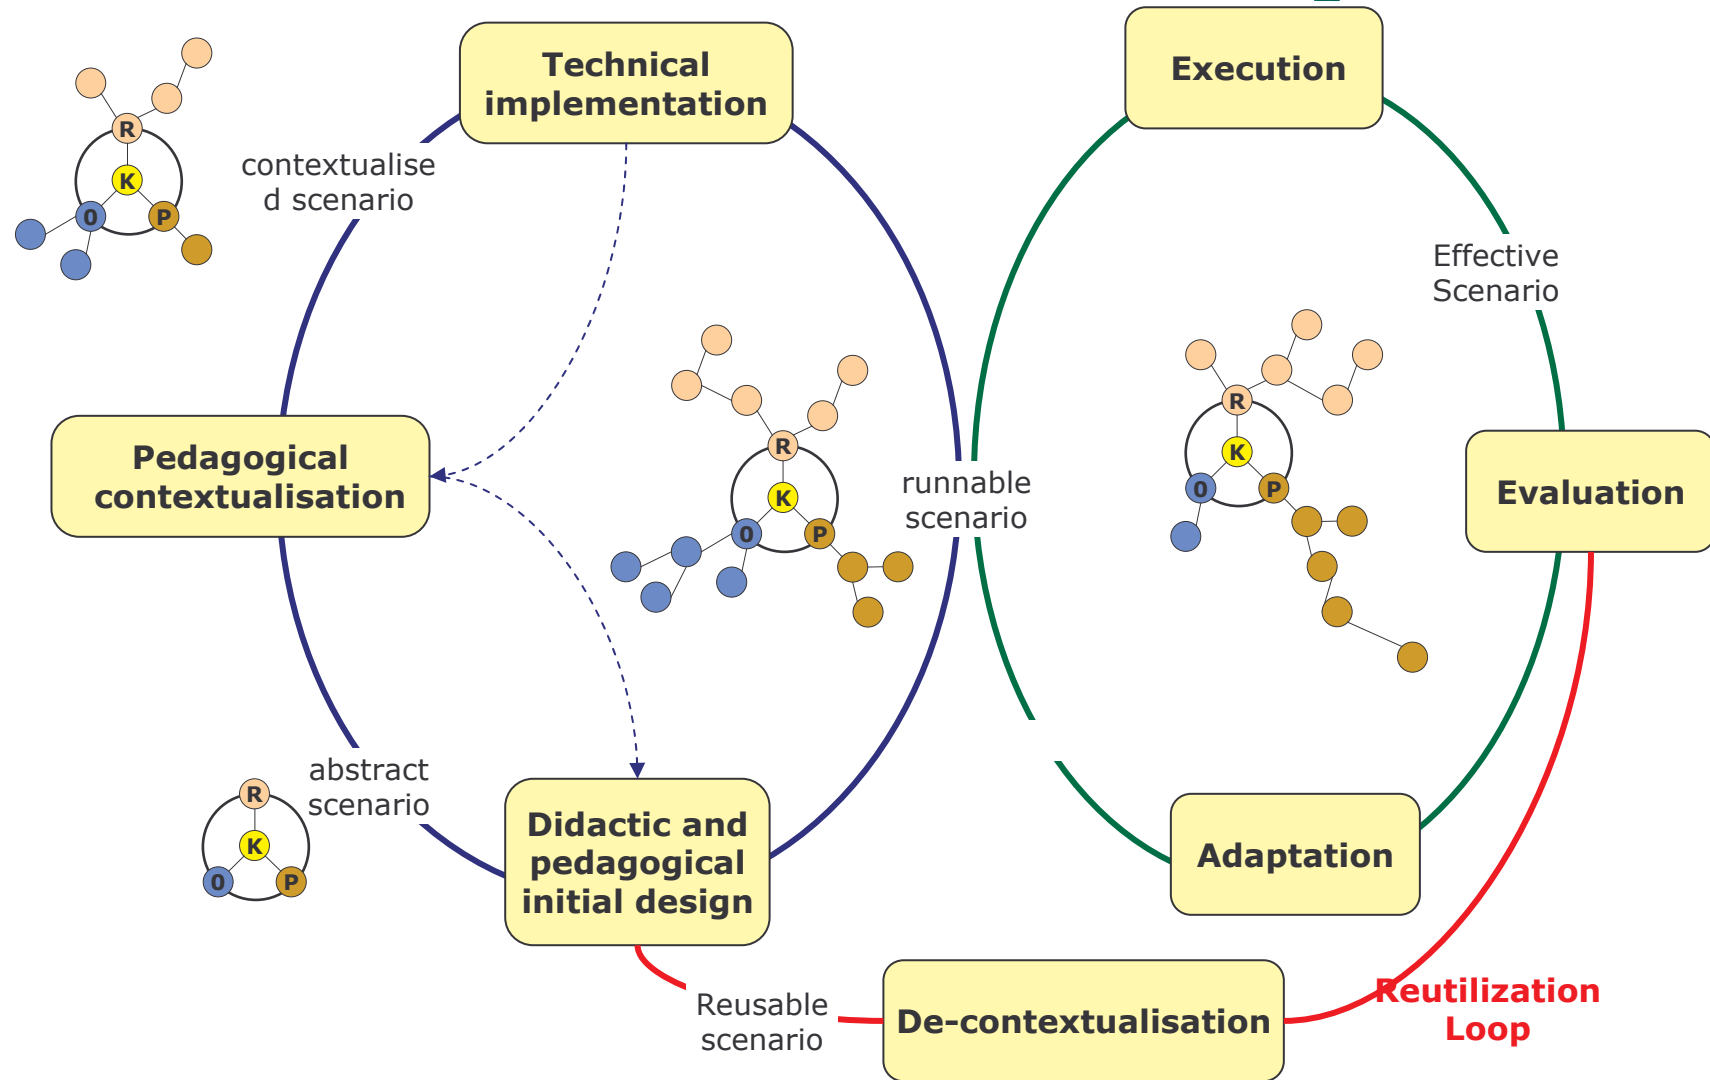

A learning scenario : our proposition

Scenarization : an incremental process

Scenarization : an incremental process

Questions about IMS LD

- IMS LD is a real success. It allows to concentrate design on activity, not on resources. But :
- Such as a notational language
 - Can IMS LD be improved to propose more homogeneous concepts (ex: role, activity VS condition and properties) ?
 - Is really IMS LD neutral and able to express all kinds of learning situations (face to face, hybrid) ?
- Such a (suggested) lifecycle of scenarios
 - Is it compatible with an evolutive concept of learning ?
